

May 2008

The **China Systems Nanjing Development Centre** has completed tests on the compatibility of CS Eximbills Version 4 with Windows Vista™ 32-bit version and certifies that no errors have been found.

It is **China Systems** policy to subject its software and subsequent releases thereof to predefined tests that give expected results to determine compatibility with supported operating systems and corresponding upgrades.

This compatibility test was performed on CS Eximbills Version 4.00118, covering the following areas: Installation, Security, and Core Program functionalities such as Maintenance, Transaction Processing and GAPI.

Further testing on selected functions will be made and fixes applied on the next patches, Cx4.00118 (R2) and (R5).

Windows Vista™

Windows Vista™ is a line of operating systems developed by Microsoft®.

Windows Vista™ is designed for businesses of all sizes and across all industries. It helps ensure that your company's PCs are more secure, reliable, and low-cost to deploy and manage. It's built from the ground up for enhanced security and the new security features further protect information-based businesses from unauthorized, accidental, and intentional misuse of intellectual property. This reduces the time and expense associated with enforcing policies and recovering from violations. Windows Vista™ also helps your organization's efficiency by letting your users find, organize, and share information effectively and connect to people, information, and devices virtually anytime, anywhere.

Windows Vista™ also helps PC users to be more effective in their work by offering improved connectivity with advanced integration across technologies, networks, and systems, as well as providing them with quick access to better organised information.
