PRODUCT NOTICE

Compatibility testing of **CS Eximbills Version 3.0** (running on **Microsoft Windows Server 2008 64-bit Edition**) with **Oracle Database 11g Release 2** has been conducted by China Systems Nanjing Development Centre and is certified successful and error-free.

As strictly enforced by China Systems' quality policy, all software and subsequent releases are subject to rigid predefined tests that will determine compatibility with supported operating systems and corresponding upgrades.

Compatibility testing with **Oracle Database 11g Release 2** included the following areas: *Installation, Maintenance, Transaction Processing, and the Interest Accrual (IA) Subsystem.*

The testing on Interest Accrual covered the following areas: *Maintenance, Housekeeping, Reports and Functions.*

About Oracle Database 11g

<http://www.oracle.com/us/products/database/index.html>

Oracle offers a range of database options for specific requirements in the areas of performance, availability, security, and compliance. Available on a choice of operating systems, Oracle Database 11g lets you consolidate business applications onto fast, reliable, and scalable database grids.

The innovation continues with Oracle Database 11g to lower costs and deliver a higher quality of service by:

- Clustering and consolidating enterprise application databases onto fast, reliable and scalable private clouds
- Maximizing availability and eliminating idle data center redundancy
- Accelerating performance by compressing data onto low-cost storage partitions
- Securely protecting information and enabling compliance
- Doubling DBA productivity and reducing the risk of change
