## OS/400 V5R4 Compatibility with Eximbills AS/400

The China Systems Nanjing Development Centre has completed tests on the compatibility of Eximbills AS/400 with OS/400 (IBM i)® Version 5, Release 4 and certifies that no errors have been found.

It is China Systems policy to subject its software and subsequent releases thereof to predefined tests that give expected results to determine compatibility with supported operating systems and corresponding upgrades.

The testing includes the following programs: SWIFT In, SWIFT Out, Customer Liability, Interest Accrual, Central Control, Security, Standing Data, Trade Finance, Utility, and Communication.

### **New features in OS/400® V5R4**

#### **Web Server Environment Support**

##### **Web Server Application Support**

OS/400® V5R4 supports WebSphere Application Server, Workplace Services Express, and ASF Tomcat.

##### **Single Sign On**

In V5R4, iSeries Access for Web also supports the WebSphere security model to provide single sign-on support among WebSphere Application Server applications.

##### **Style Sheets**

Users can provide their own style sheets if they desire a look different than the default iSeries Access for Web look.

##### **Database Function**

OS/400® V5R4 has enhanced its database functions. Among them are: Run SQL and Copy Data to Table can now support Open Office OpenDocument format; Customize now supports using WebSphere data source names to create database connections; Find Record provides a way to search for a record in a database table and display the contents of that record.

#### **Portal Environment Support**

##### **Database Function**

The Database function has new support for iSeries SQL Requests and the iSeries SQL Results - Viewer portlets.

##### **File Function**

This function has a new iSeries Zip portlet to create, add to, and extract from zip files.

Details of these and other enhancements can be found in the IBM website (<http://www.ibm.com>).
